PRACTICAL TASKS

In your routine household visits you came across a 15 years old man who lives with his Mother and her sister in village X. He reported that he is having a balance and coordination complaints caused by a switch in his epilepsy medication. The patient was diagnosed with epilepsy at age 11 years after having multiple seizures without a cause. He has been on medications since this diagnosis for the past 3 years and has not had any major issues with seizures since. However, he reports suffering from an acute exacerbation of the seizures approximately two months ago. Her mother confesses that she always seeks the counsel from witchdoctors so as to manage her epileptic son.

1. You are required to perform the following tasks:

Task 1: Educate the household on **FIVE** myths and misconceptions on Epilepsy

Task 2: Educate the household members on **FOUR** possible household injuries caused by epilepsy

Task 3: Demonstrate **Seven** first aid measure that can be applied for the management of the above patient.

2. You have been provided with the following resources for the practical tasks:

- a) Table
- b) Flipchart
- c) Chairs
- d) Foolsap
- e) Writing Pads
- f) Biro Pen
- g) MoH 100
- h) 3 Simulated household members
